SUMMARY

I design, build and run software products end to end, and I run the whole software lifecycle through AI agents. In 2026 I was the sole architect of 10+ production systems for Polish and EU businesses: a CRM with double-entry accounting and KSeF e-invoicing that runs my own company, a B2B commerce platform with 7 payment gateways and 6 marketplace integrations, a 23-language EU store with an LLM lead-qualification pipeline, a workforce platform for staffing agencies and fleet management for Uber and Bolt partner fleets, both with native iOS apps. My delivery is spec-driven and agentic: written specifications, parallel coding agents with frozen contracts, automated tests, adversarial multi-agent reviews and, on the main platforms, CI/CD with health-gated rollback. Before engineering full time I co-owned businesses and managed a team of 6, so I explain architecture in terms of cost, risk and business value.

10+ production systems shipped in 2026, as the sole architect
94% of my 2026 commits co-authored with Claude
84 of 127 audit findings confirmed by skeptic agents, then fixed
10 agents in parallel (9 coding, 1 QA): an 11K-line design system in ~14.5 h
700+ automated tests on the largest platform (339 REST endpoints)
23 interface languages on one EU platform

AI-ASSISTED SDLC

01 Specify: Requirements become written specs the agents follow: MASTER_PROMPT, CLAUDE.md and AGENTS.md, skill packs, phases with a Definition of Done. Architecture decisions are recorded as ADRs (29 on one MVP).

02 Orchestrate: Coding agents work in parallel in git worktrees against frozen contracts and a file-ownership map, with handoff prompts between models. The spin.clinic design system was built this way by 9 agents and a QA agent: 11K lines in about 14.5 hours, with no merge conflicts.

03 Test: Agents write and run the tests: Vitest, node:test, supertest against a real PostgreSQL, contract tests with golden fixtures shared by a TypeScript API and a Swift app, XCTest. 700+, 600+ and 269 tests on the three largest platforms.

04 Review and validate: Adversarial multi-agent audits: a skeptic agent confirms or rejects every finding by reproducing it, and only confirmed ones are fixed and pinned by a regression test (84 of 127 confirmed on SIMBIA CRM, 20 of 52 on AiBizBox); an accounting review ran as a multi-agent audit of 28 agents and 750 tool calls.

05 Ship: On the main platforms (SIMBIA CRM, PROTECTDENT, XyliMelts): GitHub Actions with PostgreSQL and Redis service containers, a database backup before every deploy, migrations, health-gated automatic rollback and smoke tests.

06 Operate: Daily off-site backups with weekly automated restore tests (SIMBIA CRM), Sentry, health endpoints and alerts. Incidents get a postmortem: after a sync failure wiped a working copy, the code was rebuilt from the agents' session logs and checked against production.

Tools: Claude Code (primary, on commercial client projects; in VS Code and the CLI) · GitHub Copilot (VS Code) · OpenAI Codex · Cursor (tried, VS Code preferred) · MCP servers (Chrome browser automation, iOS Simulator, Figma, Spline) · LLM APIs: Claude, OpenAI, Gemini, Groq, NVIDIA NIM

AI systems in production

- LLM lead-qualification pipeline (PROTECTDENT): map-based discovery, site crawling, evidence-based scoring from 0 to 100 and reply-intent classification into 8 intents; 7,800+ qualified B2B accounts.
- Multi-provider LLM routing: a 4-model fallback chain with hard timeouts, quotas, caching and a call log; a vision assistant that maps a photo of dental equipment to compatible products.
- Document AI: OCR, then a vision LLM, field extraction and human review, with personal data masked before any LLM call (AiBizBox, SIMBIA).
- Claude features with structured outputs validated by Zod, prompt caching and atomic per-user quotas (CashFlow); an LLM ingest pipeline that rejects quotes that are not verbatim (Novus Ignis).

ROLE FIT

Solutions Architect · AI-assisted SDLC: what the role asks, and what shows it

System and application architecture:
Sole architect of 10+ production systems: domain modules without I/O, state machines (orders with 20 to 24 states), invariants enforced in PostgreSQL triggers, event streams (LISTEN/NOTIFY to SSE), queues with lease locks and circuit breakers, a payment adapter registry, 29 ADRs on one MVP.

AI-assisted SDLC: development, testing, CI/CD:
My 2026 projects were built this way, from written specs to tested releases; the main platforms ship through CI/CD with health checks and automatic rollback. About 94% of my 2026 commits are co-authored with Claude.

Agentic coding and autonomous software engineering:
Task orchestration across parallel agents (worktrees, frozen contracts, ownership maps), quality gates (tests, Definition of Done), validation by skeptic agents that must reproduce each finding, decisions recorded as ADRs.

AI systems: AI workflows, single- and multi-agent:
AI workflows in production: LLM pipelines for lead qualification, reply-intent classification and document AI with human review, with multi-provider routing; multi-agent systems: a multi-agent audit system (28 agents, 750 tool calls) and parallel coding agents for the engineering itself.

Infrastructure choices: security, cost, performance, scalability:
Self-managed Linux infrastructure for 20+ projects on 4+ servers (nginx, PM2, systemd, TLS, Docker) with backups and restore tests; AWS integrations: S3 object storage with presigned URLs (TAXI BOSS), Amazon SES with bounce and complaint webhooks over SNS, signature-verified (PROTECTDENT); technology picked for the data and the cost, e.g. PostgreSQL trigram search chosen over pgvector (vector/semantic search) for a 500-item catalog (CashFlow); security by design: passkeys and WebAuthn, argon2id, CSP and HSTS, rate limits, HMAC-signed webhooks, signed URLs, PII masking, GDPR.

Business value and stakeholders:
Co-founder and board member of a software company that licenses its platforms; the B2B commerce platform runs three businesses' stores in production (Mind Logistic, PROTECTDENT, XyliMelts); earlier co-owned and ran a business with a team of 6; a 90-day EU go-to-market plan with pricing research across 9 countries.

Communication with technical and non-technical audiences:
For engineers: specs, ADRs, runbooks and audit reports with file-and-line evidence. For buyers and owners: proposals, seller cheat sheets, minute-by-minute demo scripts and plain tables of what a system does, what is coming and what not to promise.

Leadership:
Managed a team of 6 at Black Point (co-owner from 2020; President of the Management Board of Black Point Group sp. z o.o., 2022–2025); co-founder and Board Member of SIMBIA sp. z o.o. (2026); pro bono tech lead of a foundation's MVP (2026).

EXPERIENCE

- **Co-founder, Board Member & Solutions Architect**
  SIMBIA sp. z o.o. · Poznań · remote · Aug 2026 – present
  A software company that builds and licenses vertical platforms: CRM, workforce management, fleet management and B2B commerce. I own the architecture and the AI-assisted delivery process. The company runs its sales and statutory accounting on our own CRM.

- **Independent Product Engineer & Solutions Architect**
  STYLEICON (own studio) · Poznań · Jan 2026 – present
  Designed, built and operate 10+ production systems for Polish and EU businesses, licensed to clients (21 repositories, about 1,560 commits in 2026); since August 2026 through SIMBIA sp. z o.o.

- **Design System Engineer (contract)**
  spin.clinic · Sep 2026 – Sep 2026 (1 month)
  Built the production design system and motion UI kit (11K lines, 41 exports, used across 56 product files) with 9 parallel coding agents and a QA agent in about 14.5 hours.

- **Tech Lead (pro bono)**
  Fundacja Novus Ignis · Sep 2026 – Sep 2026 (1 month)
  Re-architected and built the MVP of a verifiable deliberation platform: Next.js 16, passkeys, a Merkle tree anchored with OpenTimestamps and an LLM ingest pipeline; 29 ADRs, 58 tests.

- **Freelance Web Developer & Designer**
  Self-employed (from 2025 as STYLEICON) · Poznań · Sep 2020 – Dec 2025
  Websites and e-shops for small businesses, designed and built single-handed on WordPress and Elementor alongside running the businesses below: Black Point (a barbershop with online booking), Architect Vision (an interior design studio), Hair Hub (a hair salon), Alibia (an e-shop) and more; from 2025 under the STYLEICON brand, with branding and video (13 sites on sunlucki.pl).

- **Co-owner**
  Black Point Barbershop · Poznań · Oct 2020 – May 2025
  Co-founded and ran a barbershop and creative hub: identity, a website with online booking, social media and video.

- **Marketing & Team Leader; shareholder and President of the Management Board**
  Black Point Group sp. z o.o. · Poznań · Sep 2022 – Jan 2025
  Managed a team of 6 and the marketing operations: campaigns, brand strategy, content and video production, client communication.

Web Developer
GreenView · May 2017 – Aug 2020
Websites from UX/UI to WordPress deployment: responsive builds, usability testing, work directly with clients and marketing teams.

PROJECTS

SIMBIA CRM crm.simbia.eu — Production · runs my company

Sales CRM with full double-entry accounting for a Polish limited company: KSeF 2.0 e-invoicing, PSD2 open banking, registry-based lead generation and a SwiftUI companion app.

~110K lines of TypeScript · ~240 REST endpoints · 57 PostgreSQL tables · 269 tests

- Accounting invariants enforced inside PostgreSQL: deferred constraint triggers, immutable journals, gapless numbering; 8 government XML filings validated against the official XSD schemas.
- Realtime updates from PostgreSQL LISTEN/NOTIFY to Server-Sent Events with per-role filtering; IMAP IDLE sync that puts client replies on the lead timeline in about 4 seconds.
- Zero-touch deploys with health-gated automatic rollback; daily off-site backups with weekly automated restore checks.
- Built through orchestrated coding agents with written specs and adversarial multi-agent audits: 127 findings, 84 confirmed and fixed.

B2B Commerce Platform bosspartners.pl — Production · licensed to Mind Logistic

Wholesale platform that replaced a client's WooCommerce store in production: company accounts with spend limits and approval flows, contract price books, RFQ and quotes, trade credit with aging and dunning.

~140K lines of TypeScript · 339 REST endpoints · 66 data models · 700+ tests

- Payment adapter registry for 7 gateways (Stripe, PayU, Przelewy24, Tpay, Autopay, Paynow, Revolut) with gateway-specific auth and signed-webhook verification.
- Marketplace channel engine (Allegro, Shopify, WooCommerce, Shoper, Empik, Erli): job queue, exponential backoff, nightly reconciliation, AES-256-GCM encrypted credentials.
- Migrated live customers, orders and products from WooCommerce, upgrading legacy password hashes to bcrypt transparently.

PROTECTDENT protectdent.eu — Production · client platform, licensed

23-language EU e-commerce for medical-device consumables, with an LLM lead-qualification pipeline for B2B sales.

23 languages · 600+ tests · 7,800+ qualified B2B accounts

- The LLM lead-qualification pipeline and the 4-model fallback chain with a vision assistant (see AI systems in production).
- Stripe checkout, VIES-based VAT and KSeF e-invoicing; Amazon SES bounce and complaint handling over SNS with signature verification; CI/CD with health-checked deploys; a 90-day EU go-to-market plan (373 price points across 9 countries).

TAXI BOSS — Production

Fleet management for Uber and Bolt partner fleets, with a native SwiftUI driver app.

- Uber Vehicle Suppliers API: OAuth2 client credentials, per-endpoint rate-limit buckets, token caching, scheduled sync.
- Driver app with an actor-based API client, single-flight token refresh and an offline outbox queue.
- Files on AWS S3 (AWS SDK v3, presigned URLs); a security remediation cycle, 95 integration tests against a real PostgreSQL and CI/CD from scratch.

Also: iApply Workforce (shift tracking, web and a native SwiftUI app), the spin.clinic design system (see Experience), CashFlow (iOS and Claude), AiBizBox (document AI), XyliMelts (D2C, 3D).

SKILLS

AI and SDLC: AI-assisted SDLC, Agentic coding, Multi-agent orchestration, Claude Code, GitHub Copilot, OpenAI Codex, MCP, LLM integration, Structured outputs, Prompt caching, Document AI / OCR, LLM pipelines, Prompt engineering

Architecture: Solution architecture, System design, Domain modules, State machines, Event-driven design (LISTEN/NOTIFY, SSE, queues), Integration architecture (OAuth2, signed webhooks, idempotency), Security architecture, ADRs

Engineering: TypeScript, Node.js (Fastify, Express), React, Next.js, PostgreSQL, Prisma, Drizzle, Redis / BullMQ, REST / OpenAPI, Swift / SwiftUI

Delivery and operations: CI/CD (GitHub Actions), Automated testing (Vitest, XCTest), Docker, Linux (nginx, PM2, systemd), AWS: S3, SES, SNS (SDK v3, presigned URLs, signature-verified webhooks), Backups and disaster recovery, Sentry

Domains: CRM, B2B commerce, Payments (Stripe, PayU, Przelewy24), E-invoicing (KSeF 2.0), Accounting, HR tech, Fleet management

EDUCATION AND LANGUAGES

Education: BSc, Computer Science, specialization: Computer Graphics · WSB University in Poznań · 2016–2018
Languages: English: C2 · Polish: C2 · Ukrainian: native · Russian: native
